# Swing doors for daily intensive use

**Swing doors must be able to withstand daily intensive use. They are often used in the catering areas, bakeries, butcheries and in hospitals or other medical institutions because of their easy accessibility and hygienic properties.**

PE swing doors serve as a separation between different departments or to limit access to certain areas. PE doors are also used in supermarkets to facilitate access to the storage space. In addition, the doors make it easy for customers to navigate between the shopping floor and the warehouse.

Swing doors are also indispensable in professional kitchens of restaurants, hotels and other catering areas. They provide easy access to the kitchen from the dining room and ensure that chefs can quickly walk through the doors with their hands full of dishes and kitchen utensils.

And what about bakeries and butcheries? Because the door leaves fully comply with the hygienic guidelines surrounding HACCP, these doors are extremely suitable for the (traditional) bakery and butchery.

### Hygienic design

Our stainless steel profile is not only visually appealing, but also fully complies with HACCP. This is because no dirt or bacteria can accumulate in the seams. Especially for environments where hygiene is a top priority, we offer an innovative window solution without rubber seals. This keeps your workplace clean and hygienic.

### Safety

Our swing doors minimize the risk of injury. When opening, there is no gap at the secondary closing edge, which reduces the risk of entrapment. Optionally, we also offer finger protection on the main closing edge, which is of course important for the protection of children, but also for yourself and your employees.

### Stability and durability

By using a robust profile made of stainless steel, our swing doors are particularly stable and durable.

This material is particularly wear-resistant and guarantees a long service life

### Material quality

The door leaves are made of PE500, a very strong material that significantly increases durability and resistance to mechanical stress. This keeps your swinging door in top condition, even with intensive use.

### Locking at an opening angle > 90°

The swing door PE-15 optionally has a practical 90° hold-open mechanism, which you can set as desired. This allows you to lock the door in the desired direction and control access at any time.

### Colors

We offer a wide range of colors that we supply from stock. If you require a special colors, we can supply it on request
